We all come from a diverse background of companies and schools.

Most of us are Computer Science students but we definitely have a good amount of EE, Physics, Math, Computer Engineering, and even some self-taught engineers here.

For Flight Software, C++ and algorithm/data structure knowledge are very important.

For Enterprise Information Systems, C# or Front End experience + great algorithm/data structure knowledge.

For Launch Engineering (the team that uses LabVIEW), awesome LabVIEW + great algorithm/data structure knowledge.

 See the trend? Study math and know your sorting algorithms.
